

# A satellite sent by Nasa

A satellite sent by Nasa, while going round the globe, pauses automatically for three seconds when it crosses a particular spot over the Saneeswarar temple (a Hindu temple dedicated for Saturn), in Thirunallar near Tanjore at Tamil nadu, India. Nasa has also officially accepted such an effect, sent some of its scientists to the said place and could not find a possible scientific explanation and that they simply returned saying 'it is a miracle'.

The story therefore concludes that temple of the lord Saneeswarar has been correctly built at a place by the ancient people knowing that a heavy dose of UV rays are falling on the temple from space on a particular day every 30 months during the day of "sani peyarchi"(Shifting of the position of the planet from one zodiac to the other, called as Saturn transverse). The same UV rays should be responsible of the slowing down of the satellite whenever it crosses that place.

This message is being forwarded by many people via e-mail and social networking sites. This was also once published in a popular private television channel in Tamilnadu. However there was no such posts on Nasa's official website or any other confidential sites. Some people strictly disagree with the message and start mentioning the scientific feasibility of this particular function. They conclude "It is impossible".

## **WHY DO THEY DISAGREE?**

The points furnished for their disagreement are

1. Several planetary and other gravitational forces have a constant impact on the satellites. Satellites revolve around at certain constant speed just to overcome these forces.
2. When a satellite pauses for even half a second, then it starts falling towards the ground.
3. It is impossible to stop any object that is moving at a minimum velocity of 8 k.m/sec suddenly.
4. Even if the satellite falls and restores its operation after 3 seconds, then it has to reach about 88 m distance upwards and at this time it must have traveled 96 Km. How is it possible?
5. At last according to Law of conservation of energy, Energy can only be transferred from one form to another. In a solar system Sun is the only source of energy. Light from sun falls on Saturn and reflects back. No planet have their own energy. Then how could Saturn change the density of UV rays?
6. Some people say that it can only stop the electronic devices and not the motion of the satellite. Then how can we see Thirunallaru from Google Maps???

So, it is confusing rite? We don't have an exact proof for this.

But still there is a relation between Lord Saneeshwara and the ring planet, Saturn with an evidence from Nasa. Please wait for my next post on this subject.

**Cassini-Huygens** is a joint NASA/ESA/ASI spacecraft mission studying the planet Saturn and its many natural satellites since 2004. Launched in 1997 after nearly two decades of gestation, it includes a Saturn orbiter and an atmospheric probe/lander for the moon Titan, although it has also returned data on a wide variety of other things including the Heliosphere, Jupiter, and relativity tests.

The Pictures by Cassini at about 902000 kilometers, using spectrometer techniques show clearly a Hexagon shaped cloud formation which covers the entire north pole of Saturn. The Hexagon is nearly 25000 kilometres across and nearly four earths could fit inside it officials from NASA says. "This is a very strange feature, lying in a precise geometric fashion with six nearly equally straight sides" says Kevin Baines, atmospheric expert at NASA. NASA exclaimed that they have never seen anything like this in any other planet and Saturn will be the only planet to see such hexagonal geometric figure and they stated it is a permanent structure.

Now here is something more mystic and mythic which coincides with the fact. The Hexagonal Geometry shown by NASA's picture resembles more the inscriptions shown in the Yandra of Sree Yandra Saneeswarar Temple. The Inscriptions as we know is 1500 years old i.e., the day when there was no science and technology. It is a remarkable coincidence and it is believed that is an act of Siddhas who with their supra celestial power inscribed the image on Holy Sree Yandra Saneeswara. This strengthens the relationship between the astrology and science.

# A satellite sent by Nasa

If you watch carefully, it is not exactly Hexagon, but two equilateral triangles placed opposite to each other. This also give 6 nodal points like a Hexagon and you can see flames coming out of the six nodal points, like a torch. This revelation adds more glory to “Sri Yandra Saneeswara” at Erikuppam. I present the satellite images by Cassini.
